

Arion

Arion

Frame

Technical data:

open: 141x49,5x16 cm

close: 73x49,5x22 cm

Construction materials:

- Frame: glass fiber reinforced polyamide
- Rollers: antistatic polypropylene

Characteristics:

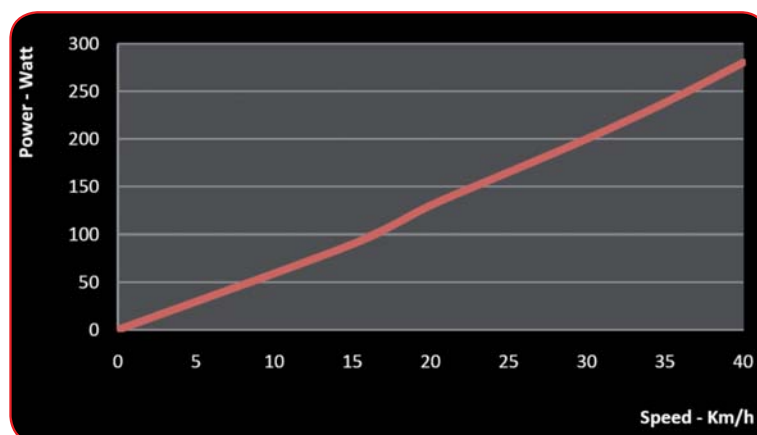

Frame: the fibreglass reinforced nylon frame features a modern and functional design which ensures stability and durability. Equipped with 8 support feet, it is very stable even during the most intensive training sessions;

Drums: the three perfectly balanced drums (diameter 85 mm) offer a smooth pedalling feel simulating outdoor riding conditions. The unique parabolic drum shape (with terminal diameter of 100 mm) offers more riding control. The perfectly smooth surface, and the special compound in antistatic material, minimises tyre wear and noise. The high quality sealed cartridge bearings are maintenance-free;

Versatile: with Arion you can train in different ways, from easy recovery rides to tough workouts simply using the gears of your bike since the power increases with speed;

Arion

Compatible: the Arion can be used with road and mtb bikes. In fact, the front roller can be quickly adjusted in 10 different positions in order to be perfectly compatible with the specific frame size of the bicycle, from a minimum distance of 944 mm (37 inches) between the wheels to a maximum of 1124 mm (44 inches);

Practical: the frame includes a handy integrated step making mounting and dismounting easier;

Compact: the frame folds up quickly for easy storage or transport;

Light: the Arion is very light (approx. 7kg) and easy to transport by means of the special handles located near the hinges.
